

Plenary talks (PV)

---

**Plenary Talk** PV VII Thu 11:00 HS1  
**Exploring the spin structure of the nucleon in polarized high-energy scattering** — ●WERNER VOGELSANG — Institute for Theoretical Physics, Tuebingen University, 72076 Tuebingen  
Three decades of experiments in polarized deep inelastic scattering

have provided important and exciting information on the spin structure of the nucleon. Over the past few years, these efforts have been joined by a powerful program with colliding polarized protons at the Relativistic Heavy Ion Collider (RHIC). The talk highlights some of the recent developments and results in theory and experiment in this field.
